

Remote Rack Solutions

Committed to providing cost-effective solutions that make you more effective!

Myth: Purchasing a remote racking device satisfies Safety and OSHA Arc Flash requirements. It is possible to have a “universal” option that will suffice regardless of manufacture or type of gear.

Fact: Performing proper adjustments and maintenance of switchgear, receiving proper training and purchasing the **correct** remote racking **solution** are critical to **improve operator safety** and help satisfy OSHA Arc Flash compliance requirements.

With the advent of NFPA 70E, many electrical system owners are attempting to implement ways to meet these requirements, such as purchasing remote racking systems for medium voltage circuit breakers.

CE Power Solutions has the necessary knowledge and experience to provide comprehensive, turn-key solutions to answer compliance requirements.

- √ **Remote rack systems are effective**
- √ **There is NO “universal fix”**
- √ **Site inspection and engineering assessment insures system integrity**
- √ **Operator training and maintenance of switchgear is critical**
